# SOLO on CLEARFIELD sunflowers

## Why choosing CLEARFIELD® sunflowers makes sense

With SOLO®, you can count on in-season broad-spectrum weed control of both grasses and broadleaf weeds in CLEARFIELD sunflowers. You can now focus on yield without rotational concerns.

## What SOLO controls

Weed control and suppression when SOLO is applied at the 40 acre rate.

<b>Grassy weeds controlled</b>	Barnyard Grass	Volunteer canary seed
	Green foxtail (wild millet)	Volunteer durum wheat
		Volunteer spring wheat*
	Japanese brome (suppression only)	Volunteer tame oats
	Persian darnel	Wild oats
Volunteer barley	Yellow foxtail	
<b>Broadleaf weeds controlled</b>	Cow cockle	Shepherd's-purse
	Green smartweed	Stinkweed
	Lamb's-quarters	Volunteer canola*
	Redroot pigweed	Wild mustard
<b>Weeds suppressed</b>	Cleavers	Kochia (up to 4 whorls)
	Japanese brome grass	Wild buckwheat

\*Non-CLEARFIELD wheat/non-CLEARFIELD canola only.

## How SOLO works

SOLO delivers the broad-spectrum control (18 weeds, including Group 1 resistant grasses) you need to grow a great crop. It controls weeds growing at the time of application and offers **exceptional follow-crop safety**.

## What crops can follow SOLO in the rotation

Canary seed	Durum wheat	Spring barley
Canola	Field peas	Spring wheat
CLEARFIELD canola	Flax	Tame oats
CLEARFIELD lentils	Lentils	

## When to apply SOLO

<b>Crop</b>	CLEARFIELD sunflowers: 2- to 8-leaf stage
<b>Broadleaf weeds</b>	Cotyledon to 4-leaf stage
<b>Grassy weeds</b>	1- to 4-true-leaf stage (6 total leaves, including 2 tillers)

## How much to apply

Each case of SOLO contains enough herbicide to treat 40 acres. Use one 8.1 L jug of MERGE® plus four 10 acre pouches of SOLO to treat 40 acres.

**The surfactant MERGE is required for herbicide activity and is available separately from your retailer.**

**CLEARFIELD®**  
production system | for sunflowers
