

# New TENSILE herbicide on CLEARFIELD canola

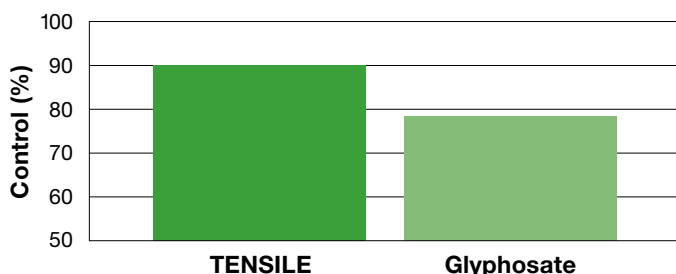

## Adding flexibility to CLEARFIELD canola

TENSILE™ gives you broad-spectrum weed control, including powerful control of wild buckwheat with excellent rotational freedom in **CLEARFIELD®** canola.

## Superior wild buckwheat control

According to the Canola Council,<sup>1</sup> wild buckwheat is one of the “weeds to watch” because of its aggressive ability to undercut yields. TENSILE can make that weed pressure disappear. TENSILE delivers superior wild buckwheat control to glyphosate.

### Wild buckwheat control

## What crops can follow TENSILE in rotation

Canary seed	Durum wheat	Spring barley
Canola	Field peas*	Spring wheat
<b>CLEARFIELD</b> canola	Flax	Tame oats

\*Some re-cropping restrictions may apply under certain soil/environmental conditions.  
1. Canola Fact, June 2006, Canola Council of Canada.

## Reliable broad-spectrum weed control

Think of the weeds that really destroy your canola yields then look at the table below. Chances are good that TENSILE can take control of your most yield-hungry weeds. It can even help you get a handle on thistles.

## The hard-working weed control of TENSILE

<b>Grassy weeds controlled</b>	Barnyard grass	Volunteer spring wheat <sup>†</sup>
	Green foxtail (wild millet)	Volunteer tame oats
	Persian darnel	Wild oats
	Volunteer barley	Yellow foxtail
	Volunteer durum wheat	
<b>Grassy weeds suppressed</b>	Japanese brome grass	
<b>Broadleaf weeds controlled</b>	Cow cockle	Shepherd's-purse
	Green smartweed	Stinkweed
	Lamb's-quarters	Volunteer canola <sup>†</sup>
	Redroot pigweed	Wild buckwheat
	Russian thistle	Wild mustard
<b>Broadleaf weeds suppressed</b>	Annual sow thistle	Kochia
	Canada thistle <sup>††</sup>	Perennial sow thistle
	Cleavers	Round leaf mallow

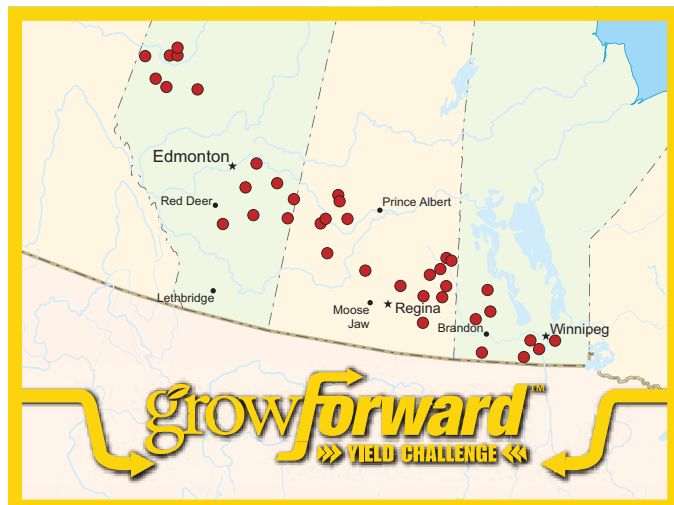

<sup>†</sup>Non-CLEARFIELD wheat/non-CLEARFIELD canola only.  
<sup>††</sup>Top growth only.

## GrowForward Yield Challenge – growers are enthusiastic about TENSILE

TENSILE™ was part of the GrowForward™ Yield Challenge this past summer in 40 locations.

### Here's what growers had to say

“No matter what herbicide system you use, you have to have a product that controls all the weeds you have in your field. TENSILE does that. It gets the hard-to-control weeds and it doesn't forget about the easy-to-control weeds either.”

*Gerald Pilger, Grower, Ohaton, AB*

“As a retailer, I'll be confident recommending TENSILE. It gives the added punch you need to control wild buckwheat and Canada thistle. Other herbicide systems tend to be weak on these weeds and may take two passes to get the necessary weed control. The advantage is that TENSILE gets them in one pass.”

*Glenn Schmidt, Retailer/Grower, Medstead, SK*

For more information about the performance of TENSILE in the **GrowForward Yield Challenge** please visit [www.yieldchallenge.ca](http://www.yieldchallenge.ca)

Always read and follow label directions.

## Keep it simple with TENSILE

When you choose TENSILE, you won't have to change the way you farm. The practices you use on your canola will stay the same when you grow **CLEARFIELD®** canola. In fact, you'll gain more than you might imagine.

- **The yield potential of CLEARFIELD canola hybrids** can go toe-to-toe with the best canola varieties available, regardless of production system.
- **You'll have the rotational freedom** to grow the crops you want next year, including all types of canola, canary seed, durum wheat, field peas, flax, spring barley, spring wheat and tame oats.
- **TENSILE can control a broad spectrum of grasses and broadleaf weeds**, including wild buckwheat, while offering an excellent tool for resistance management.
